BROAD IMPACT OF THE HDR INDICES

Photo in Santiago, Chile (Rodrigo Marquez)

Le Président de la République, Chef de l'Etat SEM Issoufou Mahamadou a présidé, les 13 et 14 mars 2019 au Palais de la Présidence, une réunion du Comité Interministériel de Suivi de l'Indice de Développement Humain (CI/IDH) au Niger. Cette réunion, qui fait suite à celle tenue le 04 octobre 2018, juste après la publication du Rapport IDH 2018, a regroupé, autour du Chef de l'Etat, le Premier Ministre et président dudit Comité, SE Brigi Rafini, les membres du Gouvernement concernés par la question, mais aussi les responsables de l'Institut National de la Statistique (INS) et les partenaires techniques et financiers du Niger (PNUD, UNFPA, OMS, Banque Mondiale, etc.).

Sovereigns and ESG

Is there value in virtue?

- ▶ We develop a model to score countries according to their main ESG attributes
- ▶ The model has a strong correlation with sovereign CDS spreads...
- ▶ ...and appears to predict long-term performance

Social

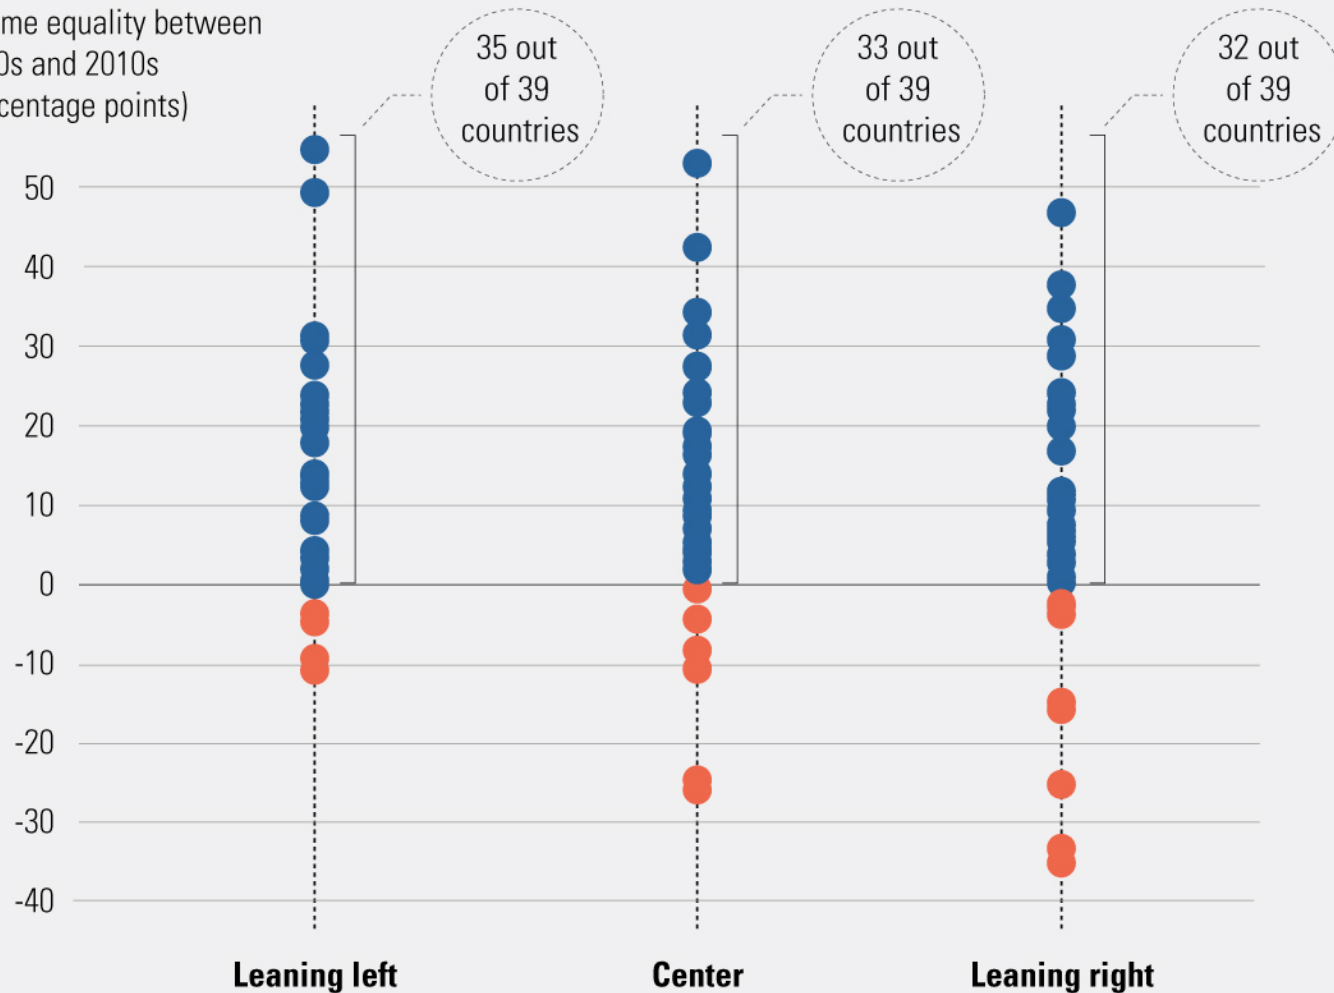

Measure 2: Human Development Index (HDI)

This is compiled by the United Nations Development Programme and looks at the development of a country, combining (1) a long healthy life, (2) being knowledgeable and (3) having a good standard of living. Combining measures of these comes up with an aggregate score. In our dataset, Norway has the highest HDI score with Senegal the lowest.

Why: This is a broad measure of development which is important from a social point of view and can have implications on a government's ability to meet its obligations.

PEOPLE DEMANDING MORE INCOME EQUALITY

Change in preference for income equality between 2000s and 2010s (percentage points)

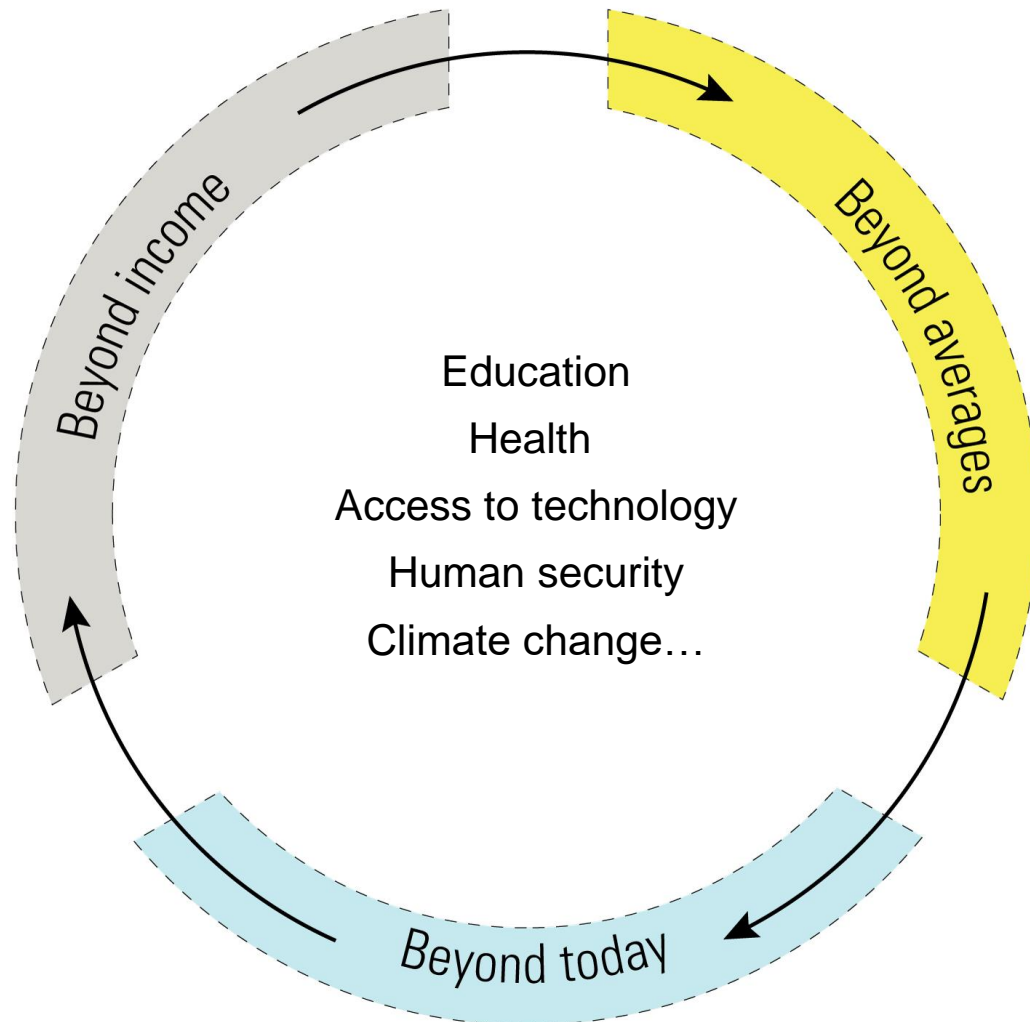

Population in selected countries by political self-identification

Each dot represents one of 39 countries with comparable data. The sample covers 48 percent of the global population. Relative preference for equality is based on answers on a 1–5 scale, where 1 is “income should be more equal” and 5 is “we need larger income differences.”

INEQUALITY IN HUMAN DEVELOPMENT: OUR APPROACH

- **Beyond Income:** centered on people's capabilities and functionings.
- **Beyond averages:** beyond summary measures like the Gini coefficient; new data and methods to account for dispersion
- **Beyond today:** how is inequality likely to be shaped tomorrow? The role of technology and climate change.

THE CAPABILITIES LENS

HUMAN
DEVELOPMENT
REPORT OFFICE

Consolidating Convergences
1990s HDRs, MDGs

Emerging Divergences
in the 21st century: SGDs and beyond

Examples:

- Primary Education
- Early childhood survival
- Entry level technology
- Resilience to recurrent shocks

BASIC ACHIEVEMENTS
(Subsistence and participation)

Deaton's GREAT ESCAPE

STILL, PEOPLE BEING LEFT BEHIND

Examples:

- High quality education at all levels
- Access to quality health at all ages
- Effective access to frontier technologies
- Resilience to unknown new shocks

STRATEGIC ACHIEVEMENTS
(Towards agency and change)

Deaton's DEATHS OF DESPAIR?

**INEQUALITIES DEFINING THE 21st CENTURY:
LARGER AND/OR INCREASING**

BEYOND THE GINI

Figure 2. Income inequality in Brazil, 2002-2014: Growth Incidence Curve

Source: authors' elaboration based on data from Morgan (2017). Interpretation: the income of poorer Brazilians grew significantly faster than that of the "middle class" between 2002 and 2014.

“[In examining] the problem of measuring inequality [...] at present this problem is usually approached through **the use of such summary statistics as the Gini coefficient**[...]. I have tried to argue, however, that this conventional method of approach **is misleading [because the] examination of the social welfare functions implicit in these measures** shows that in a number of cases they **have properties which are unlikely to be acceptable, and in general there are no grounds for believing that they would accord with social values.** [...] I hope that these conventional measures will be rejected.” (Atkinson 1970).

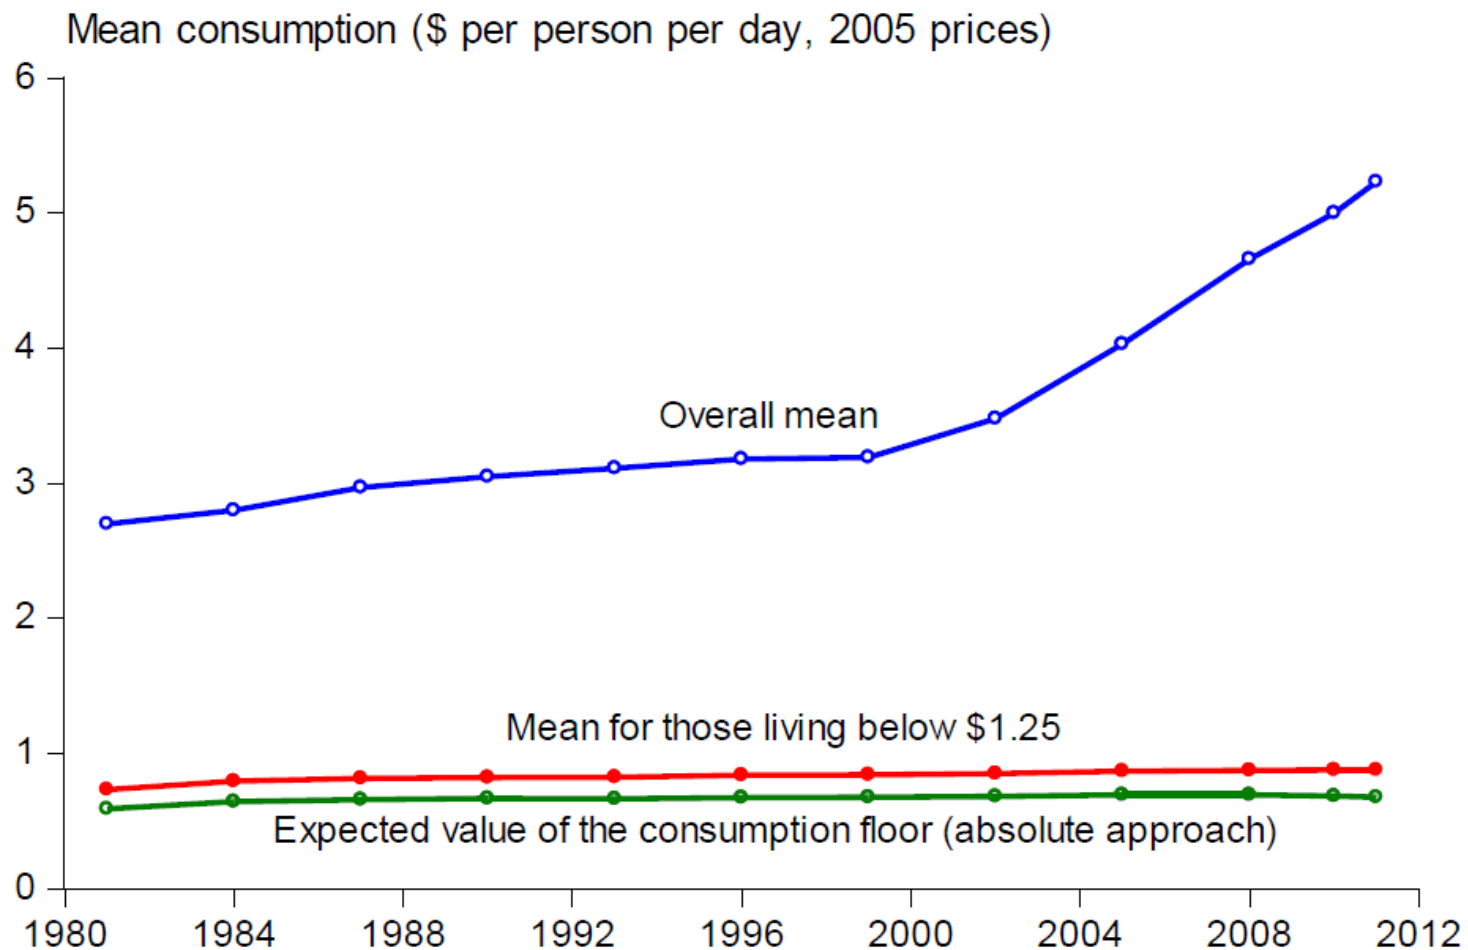

BACKLASH: SOCIAL NORMS SHOW GENDER BIAS

Balanced panel of 32 countries and territories with data from both wave 5 (2005–2009) and wave 6 (2010–2014) of the World Values Survey, accounting for 59 percent of the world population.

DIVERGENCE FROM SDGs: UNDER-5 MORTALITY

The world needs stronger convergence to achieve SDGs.

4.7 million lives could be saved from now to 2030 if micro-targeting.

Trends in child mortality for 64 low and middle income countries covering 84% of child deaths in 2017. Save the Children calculations based on DHS and MICS (with last observations 2012 or later).

CLIMATE CHANGE DRIVES INEQUALITY

A Impact of anthropogenic global warming on economic inequality

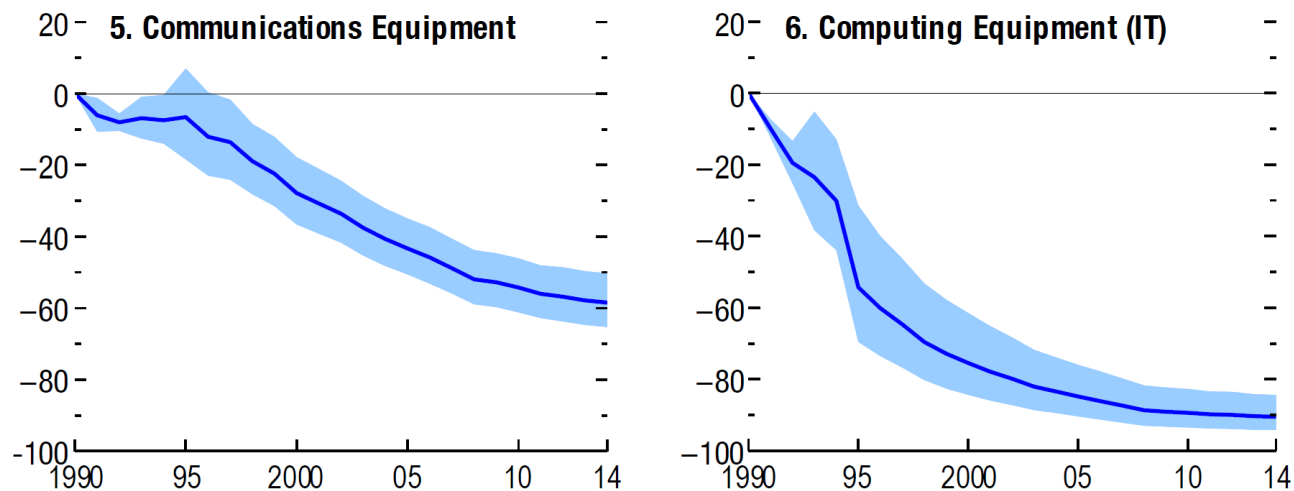

Source: Noah S. Diffenbaugh, Marshall Burke. 2019. "Global warming has increased global economic inequality." *Proceedings of the National Academy of Sciences*. April.

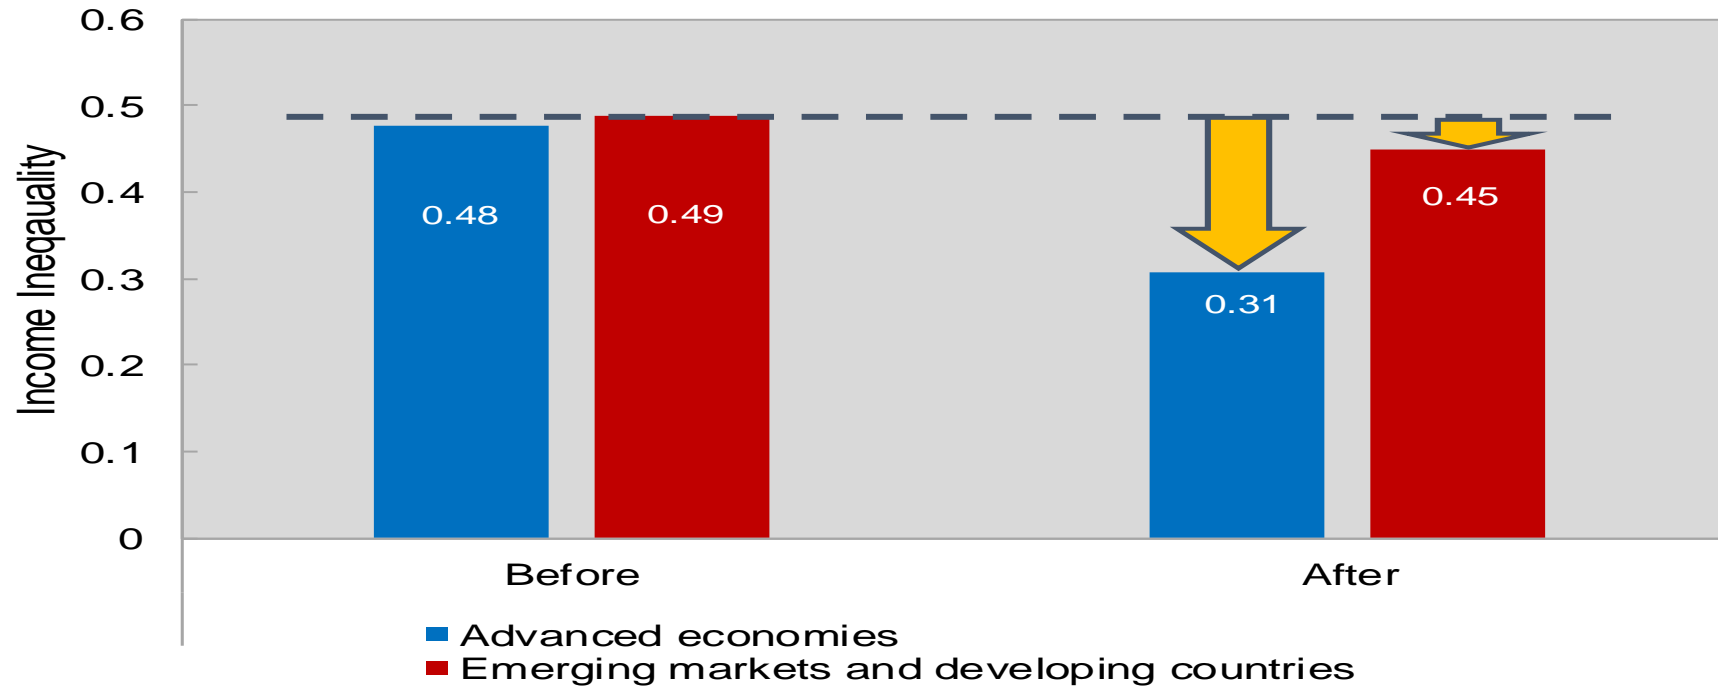

TECHNOLOGICAL CHANGE SHAPES INEQUALITY

Decline in the Relative Price of Investment Goods

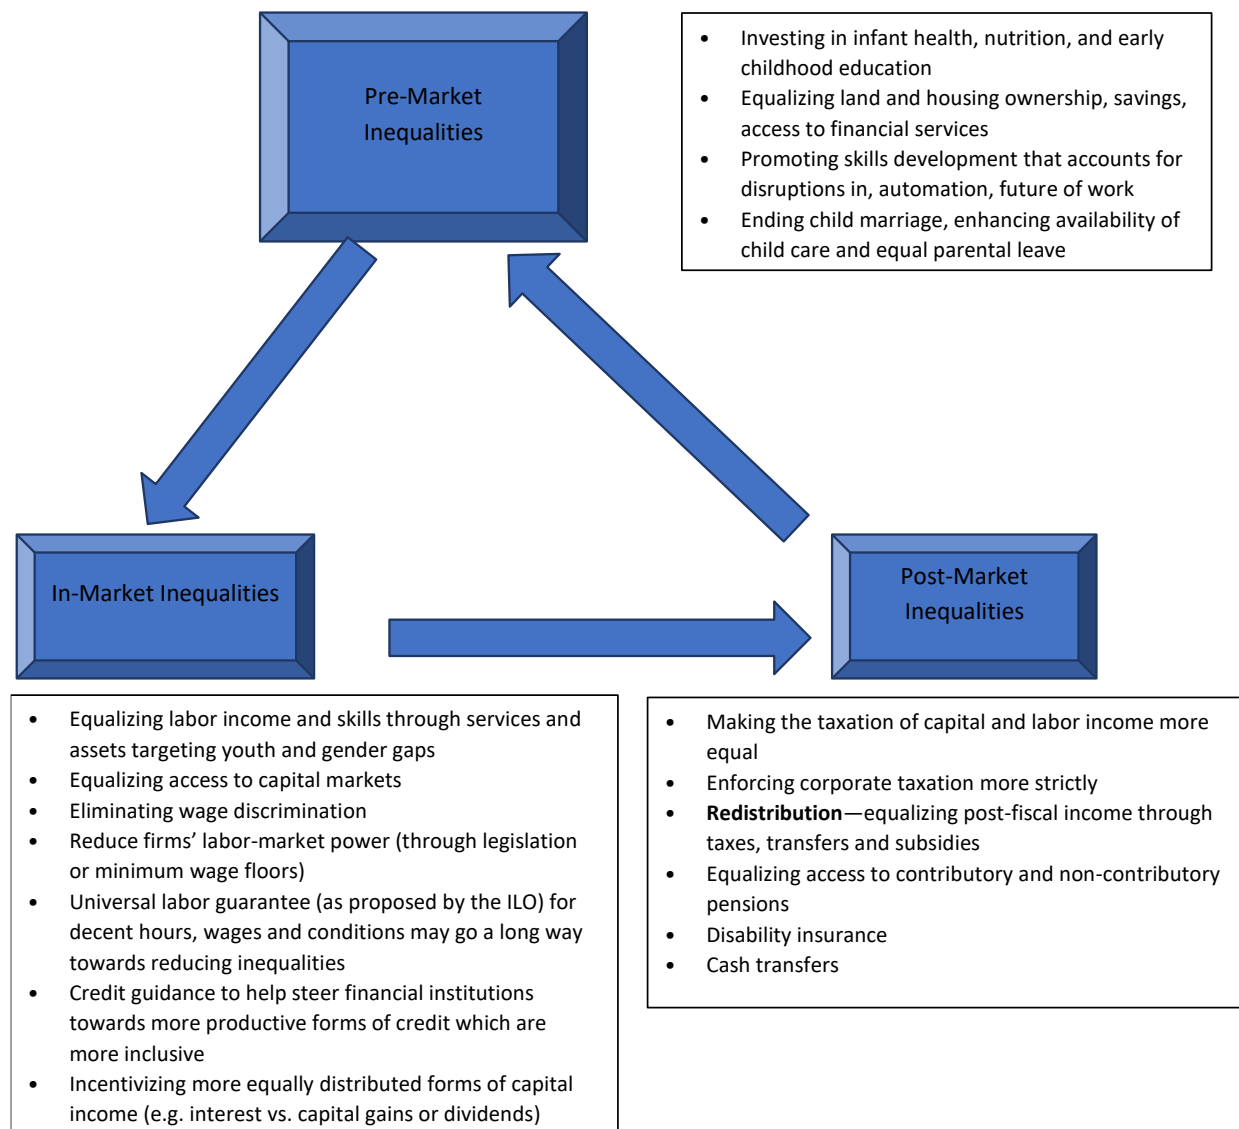

REDISTRIBUTION IS A POWERFUL TOOL...

Sources: IMF Staff Estimates using Lustig 2017; and OECD income Distribution Database.
Note: Inequality is measured with the Gini coefficient, which takes values between 0 and 1, with 0 representing perfect equality.
Emerging markets and developing countries include Argentina, Armenia, Bolivia, Brazil, Chile, Colombia, Costa Rica, Dominican Republic, Ecuador, El Salvador, Ethiopia, Georgia, Ghana, Guatemala, Honduras, Indonesia, Iran, Jordan, Mexico, Nicaragua, Peru, Russia,
