The Colombian National Evaluation System

The National System of Management Evaluation and Results (SINERGIA) was created to provide quality evidence about the National Public Policies in Colombia.

Components

Monitoring

The system compares the progress of public policies against the objectives proposed by government.

Evaluation

It provides evidence about the effectiveness of the public policy or program evaluated and its impact on the social welfare.

What does the agenda 2030 means for Colombia?

Colombia was one of the first countries on adopt the Agenda 2030 in the National Development Plan.

The agenda 2030 is a compendium of actions to improve the quality of life in Colombian population.

Helping to Colombian government to develop better public policies with long-term impact.

Integrating the global, national, local and sectorial work agenda regards to compliance of Sustainable Development Objectives.

How is the Agenda 2030 been implemented?

SDG High Level Commission

Unique institutional framework

Establish a national policy for the implementation of SDGs

SDG implementation strategy defined by CONPES 3918 consists of four pillars:

A monitoring and reporting scheme

A territorial strategy

Alliances with non-governmental actors

Access to open data for monitoring compliance with the Objectives

Why Evidence Matters for the Agenda 2030?

Having desired outcome is half part of the story

- We also need to know what actually works to achieving the Agenda 2030

Relevance of using research evidence to underpin the design of Public Policy

Practitioners and local institutions do not know how interventions can get them there
- Need of evidence of *what, how*
- Mainstream culture of evidence > low chances of finding credible evidence

Using the Agenda 2030 for building a national evaluation uptake system

Generating evidence, using evidence curation tools

- Evidence gap maps
- Systematic reviews
- Evidence hubs
- Replication programme

Strategies of evidence translation

- Uptake matters

- Incentivise a learning and evaluation culture

Challenges to date

Continuum: evaluation results, evidence, use and knowledge

Improve our knowledge about how to make evidence getting used

Democratise evidence by making it accessible

Disseminate evidence to audiences

Work with local partners and weak

Use of behavioral science to help understanding motives
